**THE NAME SAYS IT ALL**

### PROTECT CRETE MOISTURE-FIX

**Moisture-Fix** has been specially formulated with the flooring installer in mind, to easily overcome expensive failures resulting from sub-floor moisture problems. **Moisture-Fix** also allows flooring installation to take place on new concrete after 14 days or less after concrete has been poured, thus saving some times months, waiting for concrete to dry out to the required level. **Moisture-Fix** is ready to use, just pour and spread, (no mixing) no special tools or mixing equipment, no messy clean up required as with two part epoxy systems etc, virtually indefinite shelf life saving on wastage and giving flexibility to have on hand for those unexpected moisture jobs in remote areas and out of business hours, in most cases install floor coverings in 24 hours where other systems require 48 and some times 72 hours, site access and walkable in one hour, user friendly, non toxic, non flammable, zero VOC, environmentally safe and odourless. Can be applied on old concrete, wet surfaces and will withstand hydrostatic pressure. Unlike many other topical membrane barriers that, if perforated, it basically renders the system ineffective. **Moisture-Fix** penetrates deep inside the concrete matrix and allows dropping of tools, drilling, nailing and surface damage to occur with out jeopardising the moisture proofing function in any way. **Moisture-Fix** is clearly innovative, designed to give the installer peace of mind, convenience, and at the same time, is safe to use and truly saves time and money.
